# TFM TRACKER | FEED MANAGEMENT SYSTEM

Today feeding is not simply loading and unloading a feeding machine. Modern dairymen want to know what they are feeding and what the costs are.

Trioliet now introduces TFM Tracker. TFM Tracker is a feed management system that provides livestock farmers with a total solution to manage feed costs, promote efficiency and improve production. TFM Tracker also provides valuable management tools including operator control, stock management, feed recipes based on nutrient value, online data exchange with nutritionists and various reports showing trends in feeding and costs development.

Feed ingredients, recipes and herd groups are entered using the PC. Datalink (wireless) or a USB stick is used to send information to the Triotronic programmable weighing indicator on the mixer feeder. During feeding the actual weights loaded and fed are saved and returned using Datalink or a USB stick.

## **Feed costs management**

TFM Tracker shows clearly the relations in programmed rations and fed rations. It offers the tools to reduce differences of up to 20%. It calculates and registers daily feed costs and DM intake which allows dairymen to feed more efficient and accurate and reduce peaks and troughs in production

## **Recipes based on nutrient values**

Clear reports showing the nutrient value of the recipes allowing the user to make his recipes based on the nutrient values of the different ingredients. With TFM Tracker Online this can also be done in consideration with your own nutritionist.

#### **Feed mixer maintenance management**

By registering the number of loads and the auger revolutions of the mixer feeder action lists and service data are supplied. This allows a better preventive maintenance for a longer working life and a reliable performance of the mixer feeder. Day in and day out.

#### **Nutritionist access**

TFM Tracker comes with an integrated TFM Tracker Online function for online data exchange with nutritionists, advisors etc. Feed ingredients, recipes and herd groups can be modified to update the data at the farm. The feed manager keeps the overall control by accepting or refusing the online changes. This allows an easy way to have closer contact with your dairy advisors.

#### **Central data server for back-up**

The data of TFM Tracker is automatically backed up to an external server. In case of PC failure the system can easily be recovered with data from only one day old.

#### **Worldwide access to TFM Tracker**

Access to your data and feed reports from every device with internet access. Feed management as comfortable as you want. The data of numerous farms using TFM Tracker can be compared on an anonymous way. Side-by-Side comparison of DMI, herd size, mixer style, number of feedings and much more.

#### **Easy to use with wide service support**

With a high system flexibility and a great ease of use TFM Tracker offers a feed management system for every dairyman. Clear reports result in fast analysis and insight into trends. A specialised international help desk offers professional support in the language of the dairyman.

## Features TFM Tracker system

Functionality	Lite	Pro	Pro+
Easily upgradeable to higher level via internet	v	v	
Data transfer from and to indicator	v	v	v
User friendly Windows based software (W2000 and higher)	v	v	v
Entry of feed ingredients and registration of ration costs	v	v	v
Entry of group information and registration of feed costs	v	v	v
Dry matter values can be adjusted easily	v	v	v
Calculation and registration of dry matter intake	v	v	v
Adjustment of "weights" and "numbers of animals" also on indicator	v	v	v
Various settings for more efficient and accurate feeding	v	v	v
Operator accuracy registration for loading, mixing and feeding	v	v	v
Controlled access feed mixer operator/employee	v	v	v
Clear reports and history comparison	v	v	v
International help desk	v	v	v
Online-Support (High speed internet required)	v	v	v
Single Mixer Datalink between PC und Triotronic 3600V (wireless)	v	v	v
Analysis reports with tables and graphs		v	v
Report generator for management reports		v	v
Online module for online data exchange analysis nutritionist		v	v
CRM (feed advisor, feed supplier)		v	v
Manual registration feed refusal		v	v
Stock projection		v	v
Maintenance management feed mixer		v	v
Linkable to farm management programs		v	v
Interactive graphic reports			v
Yield reports			v
Registration of feed refusal via weighing system			v
Stock registration and management			v
Purchasing feed ingredients			v
Milk production and feed efficiency			v
<b>Optional</b>			
Online access to your feed data	v	v	v
Online communication with nutritionist and other dairy advisors	v	v	v
Online benchmarking	v	v	v
Automatic Back-up	v	v	v
